Sensitive data

- Can you really deposit your data in a public repository?
- Which repository should you use to publish your data?
- How do you prepare your data for publication in data repositories?
- More information
- Relevant tools and resources

Link to RDMkit: <https://rdmkit.elixir-europe.org/>

Why should I deposit my data?

- Increased Visibility (SEO), added value → 25% more citations
- Funding agencies requirement; institutions, and journal publishers policies
- Save money on storage

Where should I deposit my data?

Preferably somewhere where most things are taken care of?

Where should I deposit my data?

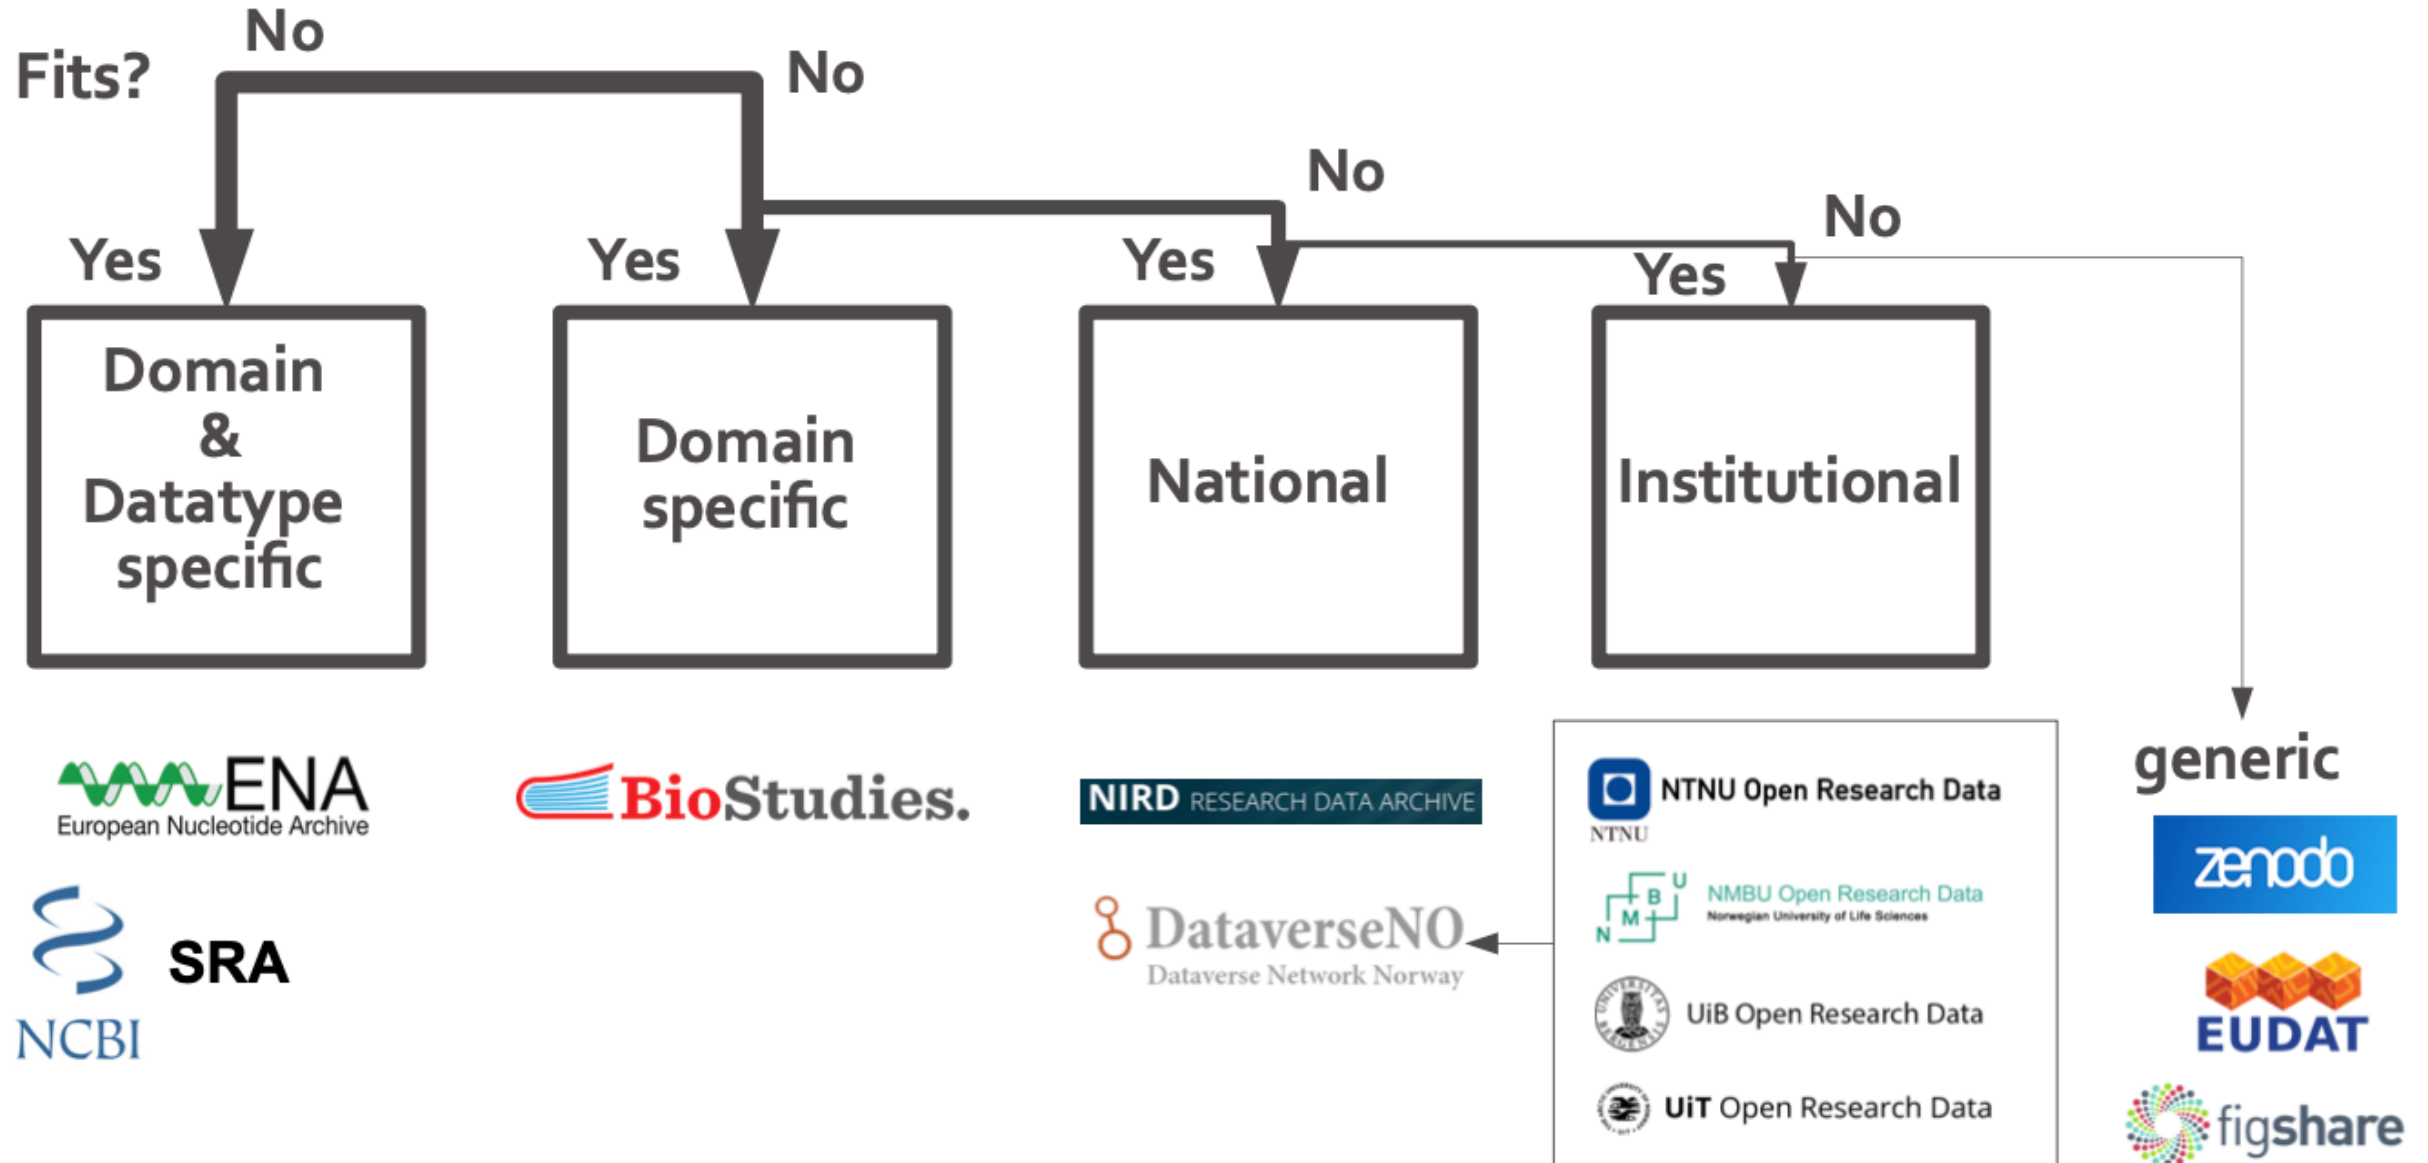

- 1641 databases for molecular biology
- Each journal publisher has its own policies and recommendations
- fairsharing.org : 1863 registered database
- re3data.org : 2834 registered database

Community-developed platform (including standards, repositories and policies across all disciplines)

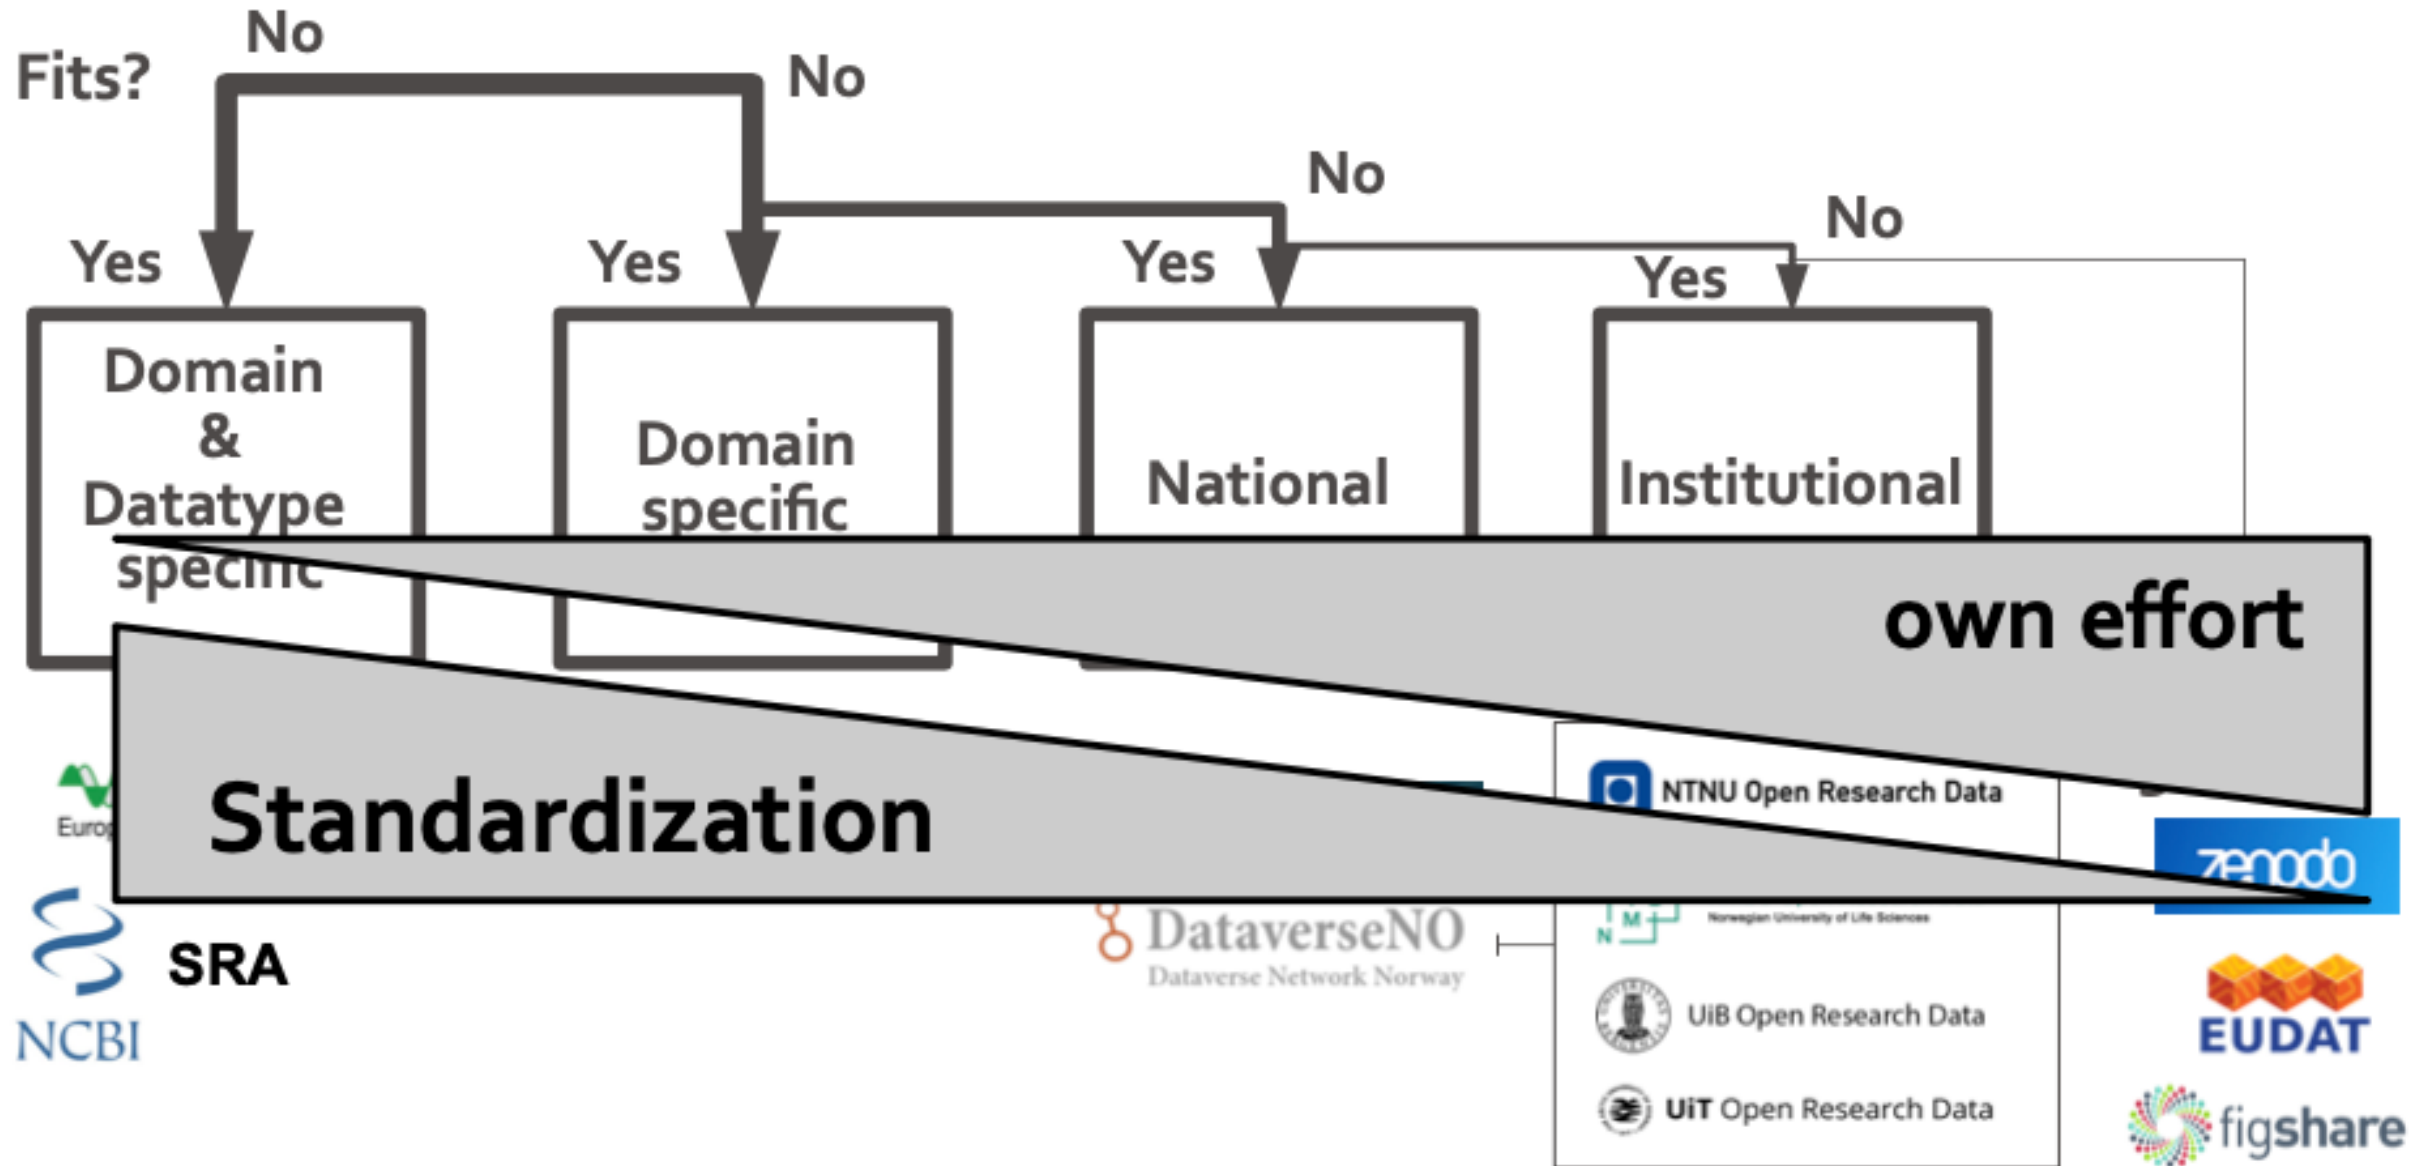

Registry of Research Data Repositories (overview of existing international repositories of research data from all academic disciplines).

Long-term storage of data

Elixir Data resource services: delivered by different Elixir nodes

Elixir Data resource services

22 resources of fundamental importance to the wider life-science community and the long-term preservation of biological data

Elixir data resource services

12 deposition database for experimental biomolecular data

<https://elixir-europe.org/platforms/data/core-data-resources>
<https://elixir-europe.org/platforms/data/elixir-deposition-databases>

Elixir Deposition Databases

- Recognized & recommended
- Free of charge
- Quick upload
- Not operated by single university/government
- Guided submission process
- Generous embargo regulation (2yrs)
- API access (upload from NeLS planned)
